When the cells in the remaining three T25 flasks reach confluency three days later, they will be split 1:3, resulting in 3 T75 flasks to be frozen. We recommend freezing away at least 3 T75 flasks. Thus, within a week of receiving the HL-1 cells, you should have three cryovials of these cells frozen away for future use.

Most methods for inferring gene-gene interactions from expression data focus on intracellular interactions. The availability of high-throughput spatial expression data opens the door to methods that can infer such interactions both within and between cells. To achieve this, we developed Graph Convolutional Neural networks for Genes
